

FRONT END INTERVIEW TASK

Version: Mar 2019

## TASK

Create an application using a framework of your choice that will display the top 20 most popular Movies, TV shows and People using The Movie DB API.

These should be split into separate categories that you can switch between;

- Movies
- TV Shows
- People

When you click on an item, open a modal to show details related to that item.

Styling is up to you, make it look presentable.

## RESOURCES

- The Movie DB - <https://www.themoviedb.org/>
  - o Documentation - <https://developers.themoviedb.org/3>
  - o API Key - d0aea524bd07ed49cbc26dff63f357dd

## REQUIREMENTS

- Clean, readable code.
- Save your code within a public repository on GitHub. Please include instructions showing how to run the application locally.

## BONUS

- Add a feature to enable live search within a category.
- Implement some test cases using Jest.
